

The importance of cleaning cars

**Thanks for all your
diligence in
washing vehicles!**

it IS worth it . . .

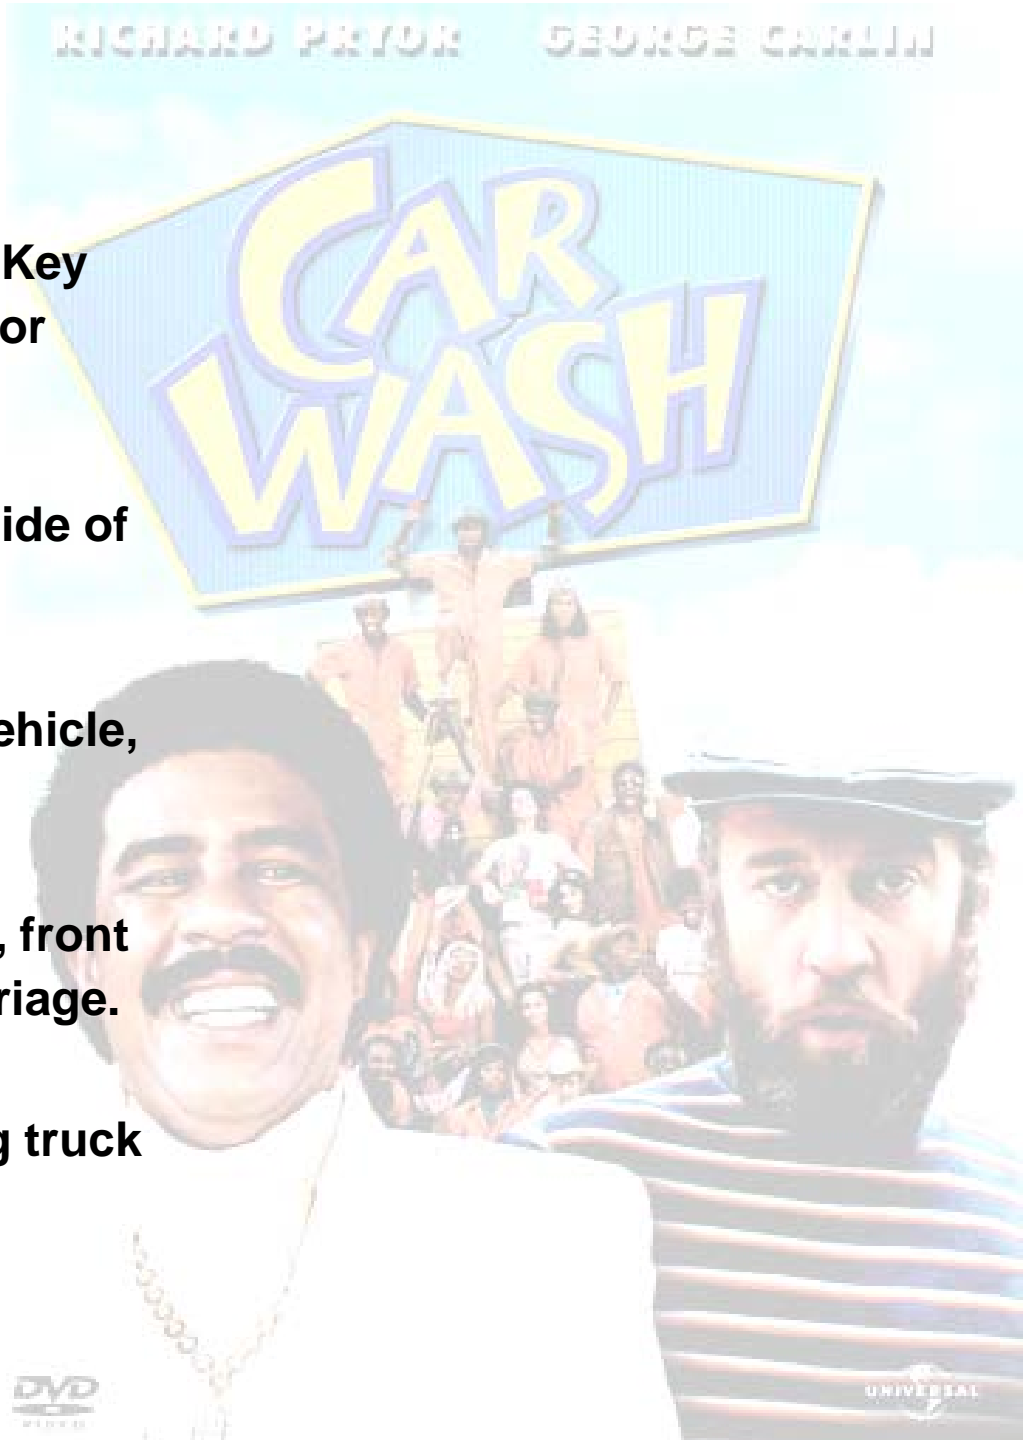

WHEN TO WASH:

- Exterior and interior of all vehicles will be cleaned PRIOR to the FIRST day of use of the work week.
- Particularly muddy or dirty vehicles, will be cleaned immediately before returning to the field.
- Cleaning is mandatory when vehicles are driven through incipient weed infestations, particularly *Chromolaena odorata*, *Schizachyrium condensatum* and *Cenchrus setaceus* sites.
- See SOP-9 Fleet Management for more info.

Range Specific Considerations:

- We are required to ensure vehicles are CLEAN when ENTERING a range.
- All vehicles are REQUIRED to wash upon EXITING a range, particularly KTA, SBE, SBW.
- All vehicles are required to wash when moving between geographically separate locations.
 - Includes off-installation off-road areas.
 - Includes between SBS & SBW.
- If you do NOT leave the hardball road (paved or gravel only, no grassy road edges); no need to wash that day.
- If you are working in the same installation multiple days in a row; can wash at the end of last day, before heading to new work site.

- **Vacuum** inside of car. Key areas are floor, seats, and door pockets/edges.
- Alternatively, **sweep** inside of car with brush.
- Clean any **trash** out of vehicle, interiors and truck beds
- **Spray** tires, wheel wells, front and back bumpers, undercarriage.
- **Wash** exterior, including truck beds.

WASHING LOCALES
